DETAILED ACTION

Claim Rejections - 35 USC § 102

- 1. The following is a quotation of 35 U.S.C. 102(b) which forms the basis for all obviousness rejections set forth in this Office action:
 - (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 5-8, 12, 16, 21, 22 are rejected under 35 U.S.C. 102(b) as being unpatentable over Thornton (US 6208681).

With respect to claims 1, 7, 12, 16, 21, 22 Thornton '681 shows and discloses an array of VCSEL including a first and second VCSEL (Fig 6, 9-18) including a first and second or more laser apertures bounded by partial or complete oxidized wall (Fig 18: 322,324,326)(Col 3: 1-15)(Col 6), with a contact simultaneously provide current to first and second or more VCSEL to causes mode coupling or locking between the VCSEL (Col 7: 15-40)(Col 8: 60-67), where the opening between the wall facilitate evanescent wave (mode propagating inside the waveguide or light that passes from the core into the cladding) to interact with the active region of the second or third VCSEL (Col 6: 30-35)(Col 5: 35-55). Since claim 22 recites the same or identical elements/limitations it is inherent to use patents ('681) to recite the method of forming an array of VCSEL, product by process.

With respect to claims 5,6 Thornton '681 discloses the transparent conductor contact, and where laser aperture passes through the transparent conductor (Col 7: 15-20, 40-50)

With respect to claim 8, Thornton '681 discloses the non-oxidized gap between the laser aperture (Col 6: 30-35).

Application/Control Number: 10/625,811 Page 3

Art Unit: 2828

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or non-obviousness.
- 4. Claims 2-4, 9-11, 13-14, 18, 20, 23-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thornton (US 6208681).

With respect to claims 2, 4, 13, 20, 26, Thornton '681 discloses the above, the claim further require a high gain region positioned between first and second VCSEL to enhance mode coupling between first and second VCSEL. Thornton '681 did not discretely disclose the high gain region between first and second VCSEL, however Thornton '681 did disclose the dopants or ion implantation (Col 5: 30-40; 55-67)(Col 10) that could increase the high gain region to enhance mode coupling, as disclosed by applicant's specification sections [0022-0023].

Application/Control Number: 10/625,811

Art Unit: 2828

With respect to claims 3, 14, 18, 25 Thornton '681 discloses the contact provide the current to the gain coupling region, or simultaneously pump current through first and second VCSEL. (Col 2: 40-50)(Col 7: 15-400) (Col 8: 60-67),.

With respect to claims 9-11, the claims further require a plurality holes between the laser aperture. It has been held that where the general conditions of a claim are disclosed in the prior art, that the mere duplication of the essential working parts of a device involves only routine skill in the art. St Regis Paper Co. v. Bemis Co., 193 USPQ 8.

With respect to claims 23-24, Thornton '681 discloses the method of lateral oxidation, contact and doping to form high gain region (Col 6-7).

With respect to claim 27-32, (Col 5: 1-67) discloses the reflecting mirror structure and DBR to change the phase matching. It has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art, in this case the amount of doping in substrate or mirror layer to form higher gain or loss region. *In re Aller*, 105 USPQ 233.

Allowable Subject Matter

5. Claims 15, 17 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The references of the record fail to teach or suggest:

Claim 15:

A high gain coupling region including high gain region coupling at least one opening in first oxide wall to the corresponding opening in the second oxide wall, the high gain coupling

Page 5

Application/Control Number: 10/625,811

Art Unit: 2828

facilitating mode coupling between first and second VCSEL.

Claim 17:

A plurality of high gain coupling regions including first high gain region coupling at least

one opening in first oxide wall to second oxide wall and a second high gain region coupling

region also coupled to the contact provides current to high gain coupling region thereby

second opening in first oxide wall to opening of the third oxide wall.

Communication Information

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Tuan N Nguyen whose telephone number is (571) 272-1948. The

examiner can normally be reached on M-F: 7:30 - 4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Harvey Minsun can be reached on (571) 272-1835. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
